

## Addendum to V1190-1290 User's Manual

The printed boards of the **V1190** an **V1290** Modules with **V1X90 Customization - Hardware Enable for 2ESST** (Ordering Code **WPERS001X90E** ), in order to pilot the **RETRY** signal on the **VME Bus** (necessary for larger block transfers with **2eVME** and **2eSST** modes when running **Firmware Rev. 0.9**), were modified and therefore they have the **IRQ Line 4** disabled.
